Calcium	74mg
Iron	345mg

1 Egg = 50g (Approx.)

ONE OF FINEST BALANCED BROWN & WHITE LAYER EGGS!

NEED FOR ANTIBIOTICS & GROWTH HORMONES FREE EGGS

Currently in India Antibiotics & Growth Hormones are one of major concerns due to non regulatory poultry owners may use excess of Antibiotics & Growth Hormones to protect their birds, this leads to Antibiotics & Growth Hormones residue in eggs, which are harmful for humans.

{The study, published recently in the journal Acta Scientific Microbiology, found that samples of chicken liver showed complete resistance to azithromycin antibiotic that is commonly prescribed to humans. It said the growing antibiotic resistance in the chicken samples was due to

the use of excessive human antibiotics to boost their growth and protect them from diseases. The study also revealed that samples of egg yolks showed 100 per cent resistance to various antibiotics such as azithromycin, erythromycin, amoxicillin and nitrofurantoin. These antibiotics feature in the WHO's list of 'critically important' medicines.}

FREE RANGE ADVANTAGE

More Protein

Free-range eggs pack gives nutritional punch of 6 grams of protein, 70 milligrams of omega-3 fatty acids with high levels of lutein and zeaxanthin, (which lower your risk of vision loss), as well as healthy doses of Vitamins A, D and E. They also have plenty of choline to support memory and nerve function

More Vitamin D

Study found that free-range eggs contained anywhere from three to six times more Vitamin D than conventional eggs.

Omega 3 Fatty Acids

contribute to normal brain and eye development. They fight inflammation

MORE FREE SPACE & MORE FRESH AIR

HAPPY HENS LAY HEALTHY EGGS

NO USE OF HARMFUL ANTIBIOTICS

NO USE OF GROWTH HORMONES

and may help prevent heart disease and a decline in brain function.

FRESHNESS

All eggs which we supply are fresh maximum one day or two days old at farm level.

Our Brown breed is one of most balanced brown egg layer.

Our Hy-Line W-80 is robust white egg layer.
